Press Release

Austin American Technology Announces

Custom Cleaners!

Burnet, TX - January 13, 2011 - Austin American Technology has proven to be a leader in custom cleaning applications. Within the last month AAT developed two non-electronic cleaning applications by bringing together our knowledge and diversity in the cleaning industry.

One of AAT's custom-designed AquaTherms allowed us to clean metal parts for the jet aircraft engine industry. These parts have no electronic components but require oil, grease and carbon deposits to be removed from narrow openings and blades. The closed loop wash design incorporates a mechanical skimmer to remove oil from the wash fluid storage tank, prolonging the life of the wash chemistry.

AAT has also made advances in cleaning parts for the solar industry. New and existing technology were combined in a design that incorporates PED spray technology and high speed drying in the smallest footprint cleaner of its kind. This completely closed loop system offers a low energy solution to high volume cleaning needs.

As a world class leader in custom cleaning equipment AAT would like to hear about your cleaning applications and see if we can help find or design the right cleaner for you!

Austin American Technology engineers and manufactures high performance cleaning systems. From general purpose to high reliability requirements, AAT systems are design-driven by the science of cleaning. Our systems include batch and inline; aqueous and solvent; spray in air and spray under immersion with ultrasonics. Applications include solar panel cleaning, medical, military, aerospace, cleaning printed circuit boards (aqueous and semi-aqueous), SMT, flip chip, BGA, rework, etc.
